Clinical Case: 29 y/o Woman with Refractory DLBCL/HGBCL

DLBCL NOS, GCB with residual FL

Stage IVBE (breast, bone, liver)

IPI high, CNS IPI high

**6 R-CHOP
+ IT MTX
+ IV R-MTX/ARAC**

FISH: BCL2/BCL6 rearranged; MYC not rearranged but present in 3 copies

Clinical Case: 29 y/o Woman with Refractory DLBCL/HGBCL

DLBCL NOS, GCB with residual FL

Stage IVBE (breast, bone, liver)

IPI high, CNS IPI high

HGBCL Triple Hit

IVBE (ovary, bone)

IPI high, CNS IPI high

**6 R-CHOP
+ IT MTX
+ IV R-MTX/ARAC**

Further treatments:

- Glofitamab+Polatuzumab
- R-ICE
- CAR-T cell (Yescarta)

*Initial response
and subsequent
progression*

FISH: BCL2/BCL6 rearranged; MYC not rearranged but present in 3 copies

FISH: BCL2/BCL6/MYC rearranged

Clinical Case: 29 y/o Woman with Refractory DLBCL/HGBCL

DLBCL NOS, GCB with residual FL

Stage IVBE (breast, bone, liver)

IPI high, CNS IPI high

FISH: BCL2/BCL6 rearranged; MYC not rearranged but present in 3 copies

**6 R-CHOP
+ IT MTX
+ IV R-MTX/ARAC**

HGBCL Triple Hit

IVBE (ovary, bone)

IPI high, CNS IPI high

FISH: BCL2/BCL6/MYC rearranged

Further treatments:

- Glofitamab+Polatuzumab
- R-ICE
- CAR-T cell (Yescarta)

*Initial response
and subsequent
progression*

Relapse 4 months after CART

Biopsy: DLBCL NOS, CD20-, CD19+
Pending FISH

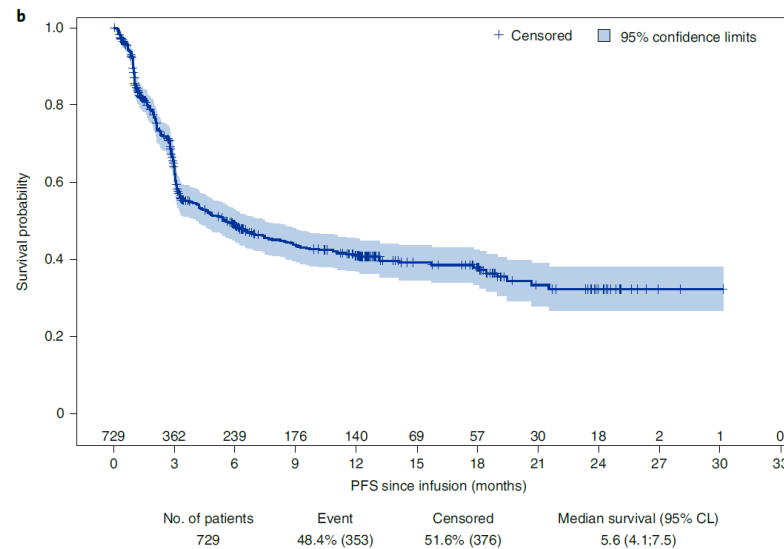

Outcomes of patients with aggressive B-cell lymphoma after anti-CD19 CAR T-cell therapy: Real World Evidence

US Lymphoma CART Consortium Real-Life

DESCAR-T Real-Life

GLA/DRST Real-Life

1-year PFS: 30-47%

53-70% of the patients fails CART

Nastoupil, et al., JCO 2020
Bachy et al., Nat Med 2022
Bethge et al., Blood 2022

Outcomes of patients with aggressive B-cell lymphoma after failure of anti-CD19 CAR T-cell therapy: a DESCAR-T analysis

Di Blasi et al., Blood 2022

Outcomes of patients with aggressive B-cell lymphoma after failure of anti-CD19 CAR T-cell therapy: a DESCAR-T analysis

PFS2 - Time of progression by progressive Set
With Number of Subjects at Risk and 95% Confidence Limits

Di Blasi et al., Blood 2022

Therapeutic Options after CART-cell failure

- Bispecific antibodies
- Targeted therapy
- Immune-modulators
- Immuno-chemotherapy
- Radiotherapy

- Role of allogeneic stem-cell transplant?

Therapeutic Options after CART-cell failure

- **Bispecific antibodies**
- **Targeted therapy**
- **Immune-modulators**
- Immuno-chemotherapy
- Radiotherapy

- Role of allogeneic stem-cell transplant?

T-cell Redirecting Bispecific Antibodies in Clinical Development for B-cell NHL

BiTE CD19xCD3

Blinatumomab

IgG CD20xCD3

Mosunetuzumab

Glofitamab

IgM CD20xCD3

Invotamab

Odronextamab

Epcoritamab

Plamotamab

Bispecific Antibodies after CART-cell Failure in DLBCL: Data from Published Phase I/II Studies

Glofitamab (N=52)

CR 35%

Epcoritamab (N=61)

ORR 54.1%

CR 34.4%

DOR 9,7 (95% CI, 5.4 to not reached)

Odronextamab (N=33)

ORR 33%

CR 24%

DOR Not Reached (95% CI 1.6–NE)

Dickinson et al., NEJM 2022; Thieblemont et al., JCO 2022; Bannerji et al., Lancet Haem 2022

Combination of T-cell Redirecting Bispecific Antibodies in Clinical Trials

A - Checkpoint inhibitors

~~B - TKI (B-ALL)~~

C - IMIDs

D - Chemotherapy

E - ADCs

F - Costimulatory bispecific antibodies

Combination of T-cell Redirecting Bispecific Antibodies in Clinical Trials

A - Checkpoint inhibitors

~~B - TKI (B-ALL)~~

C - IMiDs

D - Chemotherapy

E - ADCs

F - Costimulatory bispecific antibodies

Glofitamab plus Polatuzumab in R/R DLBCL/HGBCL

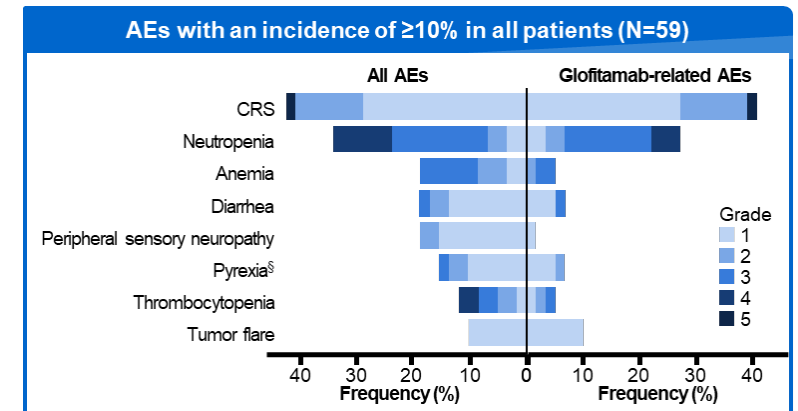

Glofit + Pola combines two non-overlapping MoA

High response rates

Safety profile consistent with that of the individual drugs

Glofitamab plus Polatuzumab in R/R DLBCL/HGBCL

Glofit + Pola combines two non-overlapping MoA

High response rates

Safety profile consistent with that of the individual drugs

→ ICML 2022: data on 111 patients (25% prior CART)

Hutchings et al., ASH 2021

Combination of T-cell Redirecting Bispecific Antibodies in Clinical Trials

A - Checkpoint inhibitors

~~B - TKI (B-ALL)~~

C - IMIDs

D - Chemotherapy

E - ADCs

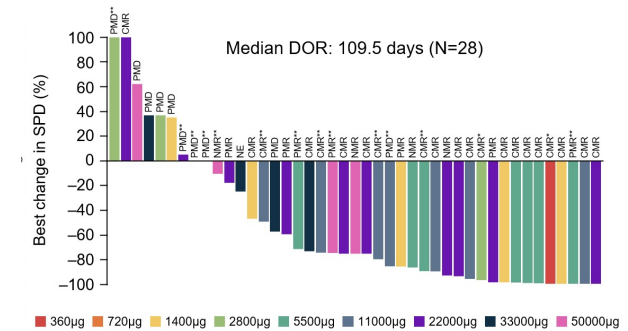

F - Costimulatory bispecific antibodies

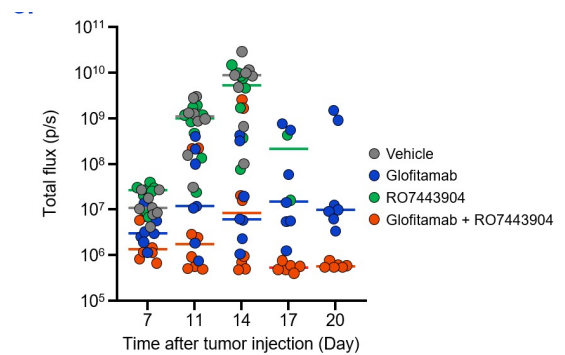

Combination of T-cell Redirecting with Costimulatory BSA

RO7227166: CD19x41BBL BSA

RO7443904: CD19xCD28 BSA

Hutchings et al., ASH 2022; Dickinson et al., ASH 2022

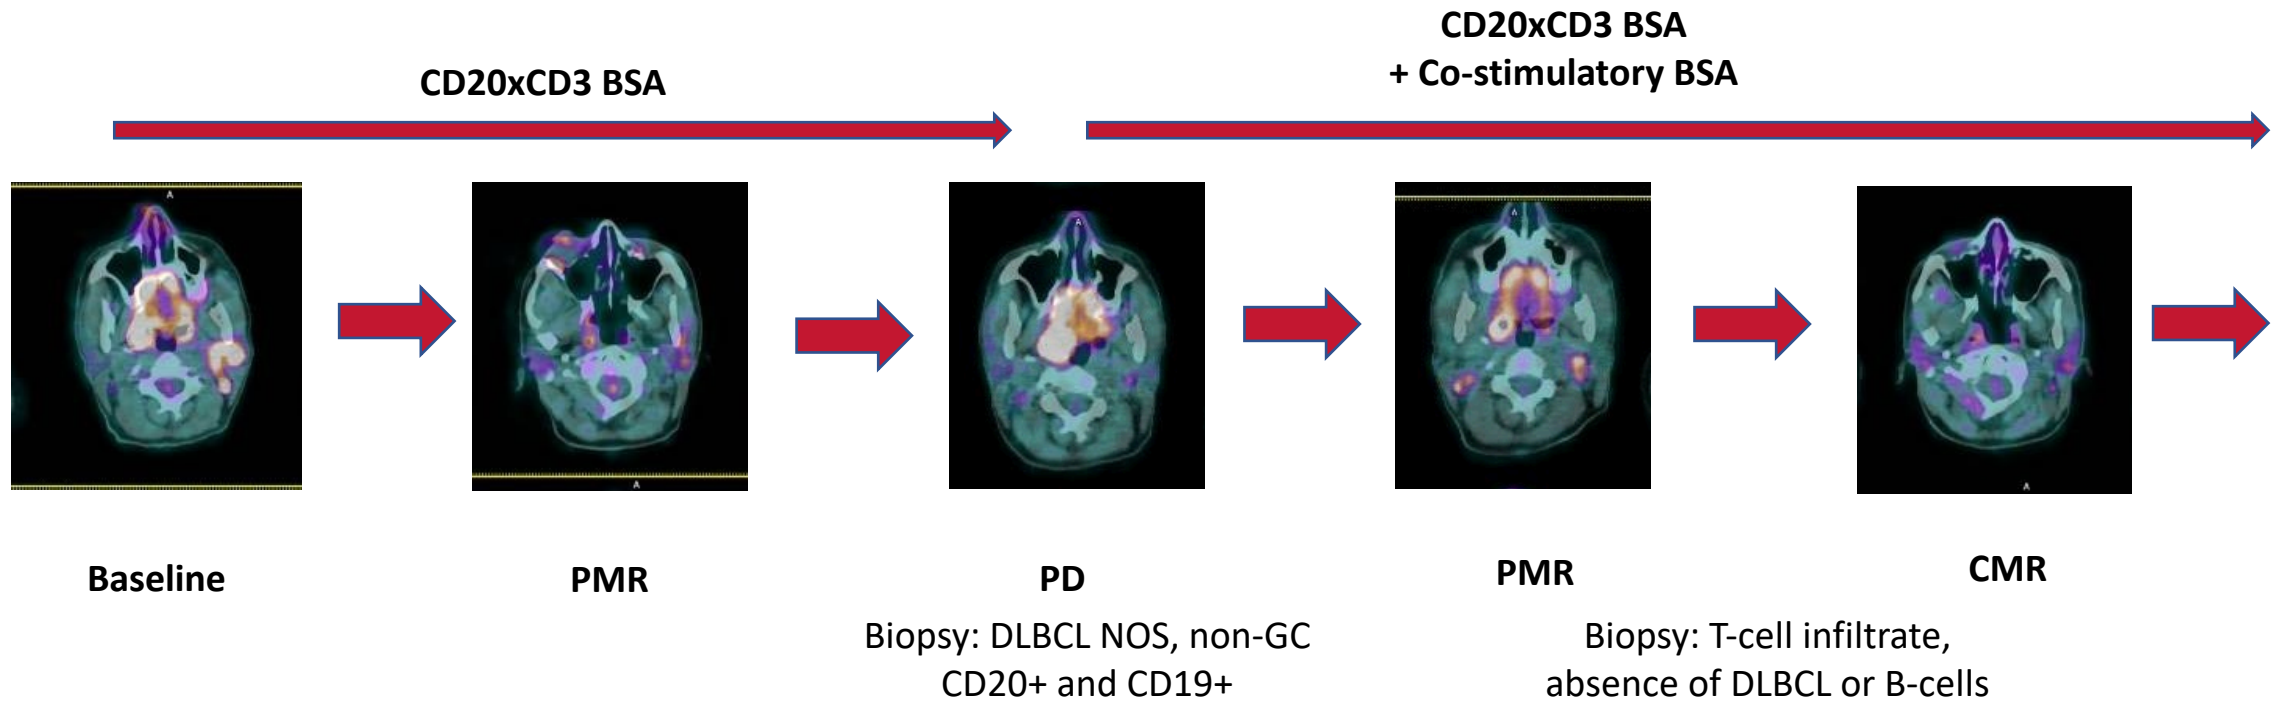

Combination of T-cell Redirecting with Costimulatory BSA

Clinical Case: 47 y/o Woman with Relapsed DLBCL

Combination of T-cell Redirecting with Costimulatory BSA

Clinical Case: 47 y/o Woman with Relapsed DLBCL

Checkpoint inhibitors after CART-cell Failure in DLBCL

Background:

Single agent checkpoint inhibitor provides poor response in R/R DLBCL

- Nivolumab in Auto-SCT-failed: ORR 10%
- Nivolumab in Auto-SCT-ineligible: ORR 3%

Rationale

CART-cell resistance is related to:

- T-cell exhaustion
- Immunosuppressive tumor microenvironment (with PDL1 expression)

→ Can checkpoint blockade reverse T-cell exhaustion after CAR T-cell?

Ansell et al., JCO 2019; Neelapu et al., ASH 2017

Pembrolizumab after CART-cell Failure

Overall response Rate: 20% (3/15)

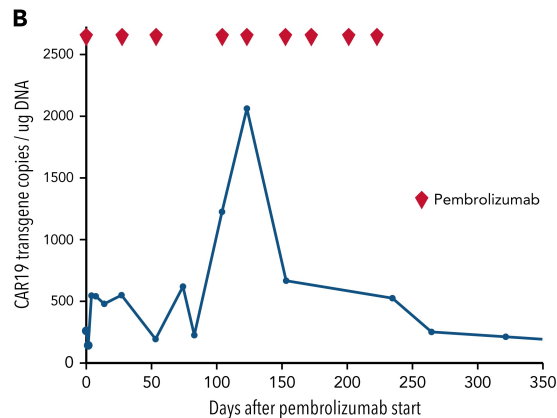

1 CR (7%)
2 PR (13%)

Low degree of T-cell exhaustion is improved by Pembro

Features of responders

Evidence of CART cell expansion after Pembro

Responders showed repeated expansion peak after Pembro infusions

Chong et al., Blood 2022

Pembrolizumab after CART-cell Failure

Overall response Rate: 20% (3/15)

1 CR (7%)
2 PR (13%)

Low degree of T-cell exhaustion is improved by Pembro

Features of responders

Evidence of CART cell expansion after Pembro

Responders showed repeated expansion peak after Pembro infusions

Who may benefit from Checkpoint Inhibitors?

Chong et al., Blood 2022

Immunomodulatory Drugs: IMiDs and CELMoDs

Pleiotropic effects of IMiDs and CELMoDs

Lenalidomide

- 41 patients treated post CAR-T (70% with Rituximab)
- Improved outcome in patients with early start of Lenalidomide (< day 15): ORR 7/11, 63.6% (vs 9/48, 18.8%), CR 4/11, 36.4% (vs 5/48, 10.4%)

Avadomide (CC-122)

Iberdomide (CC-220)

Golcadomide (CC-99282)

Ioannou, et al., Int J Mol Sci. 2021, Thieblemont et al., ASH 2020

Immunomodulatory Drugs: CELMoDs after CART-cell

Clinical Case:

56 y/o Man with R/R non-GC DLBCL

Previous treatments:

- R-CHOP
- R-DHAP + autologous SCT
- Lenalidomide
- R-Pola-Bendamustine
- Allogeneic SCT
- CART-cell

3-months
Post-CelMod

3-months
Post-CART
Pre-CelMod

Pre-CART

Allogeneic SCT after CART-cell Failure

Requirements

- Disease control
 - CR is the goal
- Fitness
 - Age
 - Comorbidity
- Donor availability

“Even if AlloSCT for patients who relapse/progress after CAR-T seems reasonable, this population is very difficult to treat.

Furthermore, Allo-SCT can be complicated by the aggressiveness of disease, poor patient performance status and/or cytopenias, which can preclude the administration of induction therapy”

Allogeneic SCT after CART-cell Failure

US multicenter retrospective study

88 R/R LBCL treated with CAR T therapy between 2013-2021 and subsequently receiving alloSCT

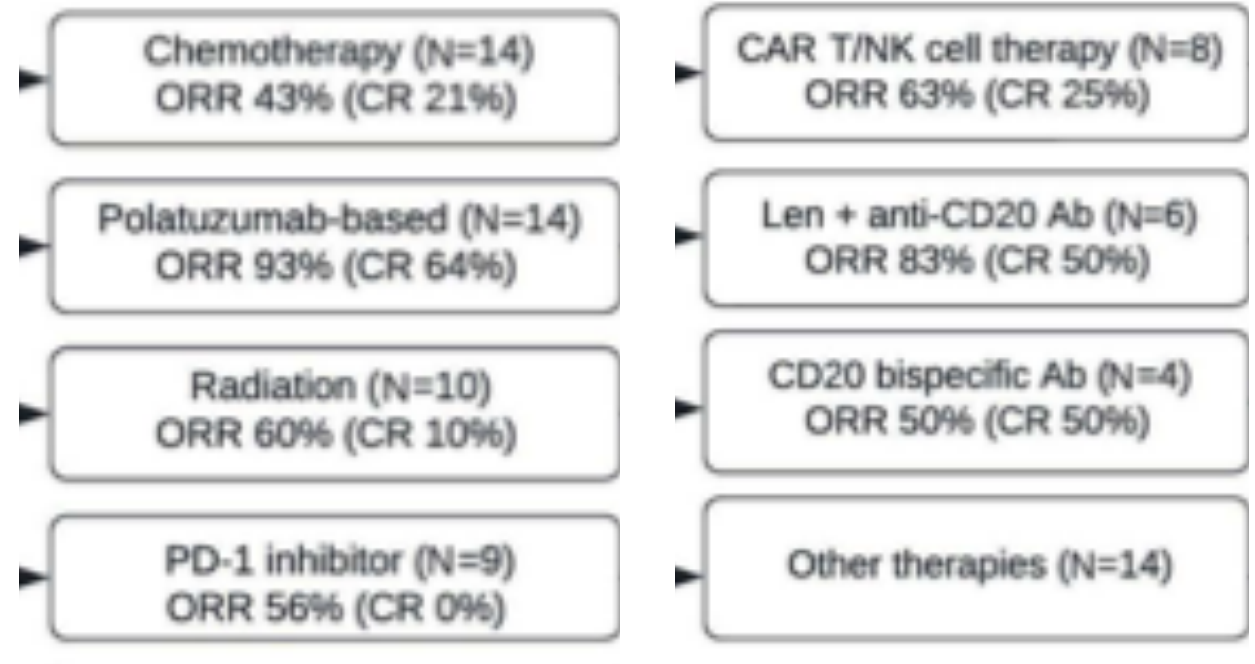

Median age 54 (19-72)

Treatment lines

- Pre CART: 3 (1-7)
- Post CART: 1 (0-7)

Low intensity conditioning in 77%

Treatments

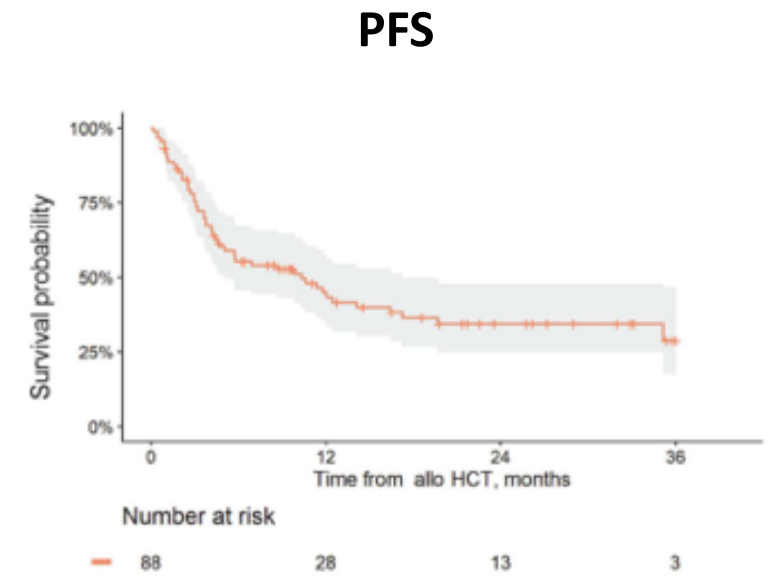

Allogeneic SCT after CART-cell Failure

US multicenter retrospective study

Outcome at 1 year:

- OS 59%,
- PFS: 45%,
- GVHD-free/DFS: 39%
- NRM: 22%
- Relapse: 33%

Zurko et al., Hematologica 2023

Early Phase Clinical Trials: Risky Business for End-Stage Patients or Opportunity?

- The improved understanding of the tumor biology and the emergence of innovative therapy expanded the aims of Phase I trials beyond assessment of toxicity and pharmacokinetic/RP2D
- Substantial response rates and long-term disease control achieved in early phase clinical trials

Allogeneic CD19-CARCIK in B-cell NHL and CLL

- After CD19-CART failure, antigen loss occurs in a minority of the cases
- Several patients are excluded from commercially available CART-cell (e.g. age, HIV)

Cytokine Induced Killers (CIK)

- Non MHC-restricted NK-like cytotoxicity, negligible alloreactivity and minimal GVHD
- Intrinsic capability of reaching disease-infiltrated tissues
- Clinical experience with allogeneic CIK cells: feasible, safe and well tolerated

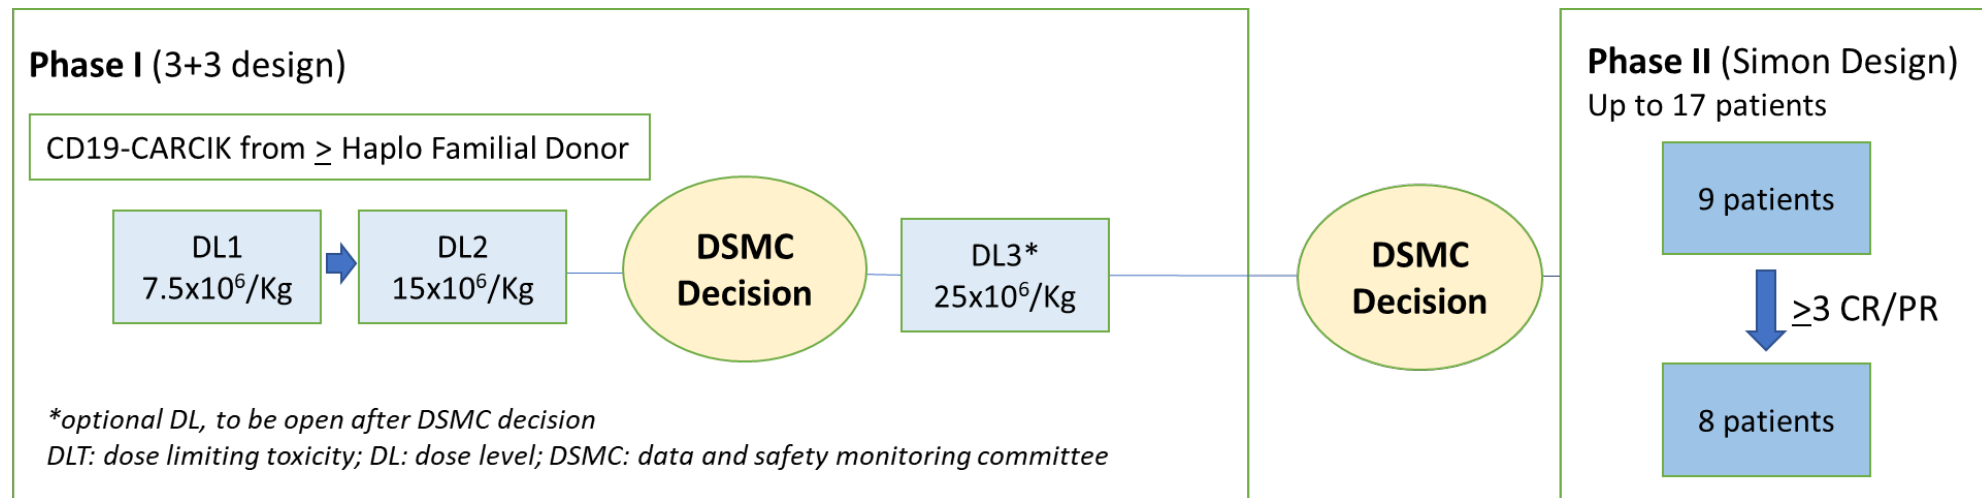

Pievani et al, Blood, 2011; Sangiolo et al. JC 2011; Introna et al, Haematol. 2007; Rambaldi et al., Leukemia 2015; Introna et al., BBMT 2017

Allogeneic CD19-CARCIK in B-cell NHL and CLL

Can allogeneic CD19-CARCIK cells provide disease control?

Phase I/II Clinical Trial FT04CARCIK
