## BACKGROUND

- Durvalumab reduced first progression versus placebo in all regions (45.4% vs. 64.6%, respectively)
- Overall, intrathoracic progression was the most common (80.6% vs. 74.5% of progressors)

	ITT Population	Subpopulation with Progression		
	Durvalumab (N=476)	Placebo (N=237)	Durvalumab (N=216, 45.4% of ITT)	
Any RECIST progression, n(%)	216 (45.4)	153 (64.6)	216 (100)	153 (100)
Intrathoracic only	174 (36.6)	114 (48.1)	174 (80.6)	114 (74.5)
Extrathoracic only	33 (6.9)	31 (13.1)	33 (15.3)	31 (20.3)
Intrathoracic and extrathoracic simultaneously	9 (1.9)	8 (3.4)	9 (4.2)	8 (5.2)

## BACKGROUND

2020

**Real-world outcomes of chemoradiotherapy for unresectable Stage III non-small cell lung cancer: The SOLUTION study**

306 pts  
no data of progression sites

24 pts no data of progression sites

**Real-world prospective analysis of treatment patterns in durvalumab maintenance after chemoradiotherapy in unresectable, locally advanced NSCLC patients**

2021

A Real-World, Multicenter, Observational Retrospective Study of Durvalumab After Concomitant or Sequential Chemoradiation for Unresectable Stage III Non-Small Cell Lung Cancer

2021

55 patients (35.5%) relapsed locally or systemically; 32 (20.6%) had locoregional progression [as the only site of disease progression in 9 (5.8%)], and 46 (29.7%) developed systemic metastases; 23 pts (14.8%) had both local and systemic relapse, and 23 (14.8%) had systemic relapses alone.

**no data of progression sites in relation to RT volumes**

## AIM

To evaluate pattern of recurrence in patients with locally advanced NSCLC treated with chemo-radiotherapy and Durvalumab

## PRIMARY ENDPOINTS

- Oligogoprosperation rate
- In-field progression rate

## SECONDARY ENDPOINTS

- Progression free survival (PFS)
- Overall Survival (OS)
- Re-irradiation rate

## PRELIMINARY RESULTS

**87 pts**

Gender

Female	26 (30%)
Male	61 (70%)

## TAKE HOME MESSAGES

### Relevant data to date

- OPD occurs in 75% of patients who progress / relapse
- In-field recurrences account for 30% of all relapses / progressions

*HIGH RT IMPACT.....*

RT was performed in 66% of pts with OPD:

- In 25% of «in-field» OPD
- In 84% of «out-field» OPD
